SidelineReel — Prototype Walkthrough

Roster-tag confidence + coach confirm · a step-by-step tour of every screen and action · Ajaia PM assessment · ajaia.ai

What this prototype is. A self-contained, simulated demo (no real footage, no backend) of the top roadmap item: before SidelineReel builds each kid's highlight reel, it checks how sure it is that a jersey number was matched to the right player. Sure matches go through; unsure ones are held and a coach confirms them in a short queue. Anything still unresolved at send time is left out, never guessed.

How to open it

- Open **prototype/index.html** in any browser (or the hosted link in the submission document). No install needed.
- Use the three buttons at top right to jump between screens. "Reset demo" on screen 3 starts over.

The demo data

Roster	#1 Mia Chen · #4 Noah Park · #8 Sam Ortiz · #11 Ava Ruiz · #14 Lily Okafor · #16 Ben Walsh · #61 Omar Haddad
Look-alike pairs on this roster	1 / 11 · 4 / 14 · 16 / 61 (these mirror the mix-ups in the support tickets)
Moments found	12 clips: 6 auto-confirmed, 4 needing a check, 2 unreadable

Vocabulary

Auto-confirmed	Confident enough to go straight into a reel.
Needs check	Low confidence, or a look-alike number exists. Held until the coach decides.
Can't read	Number not visible. Held until tagged or discarded.
Held	Excluded from reels, thumbnails and the recap.

Contents

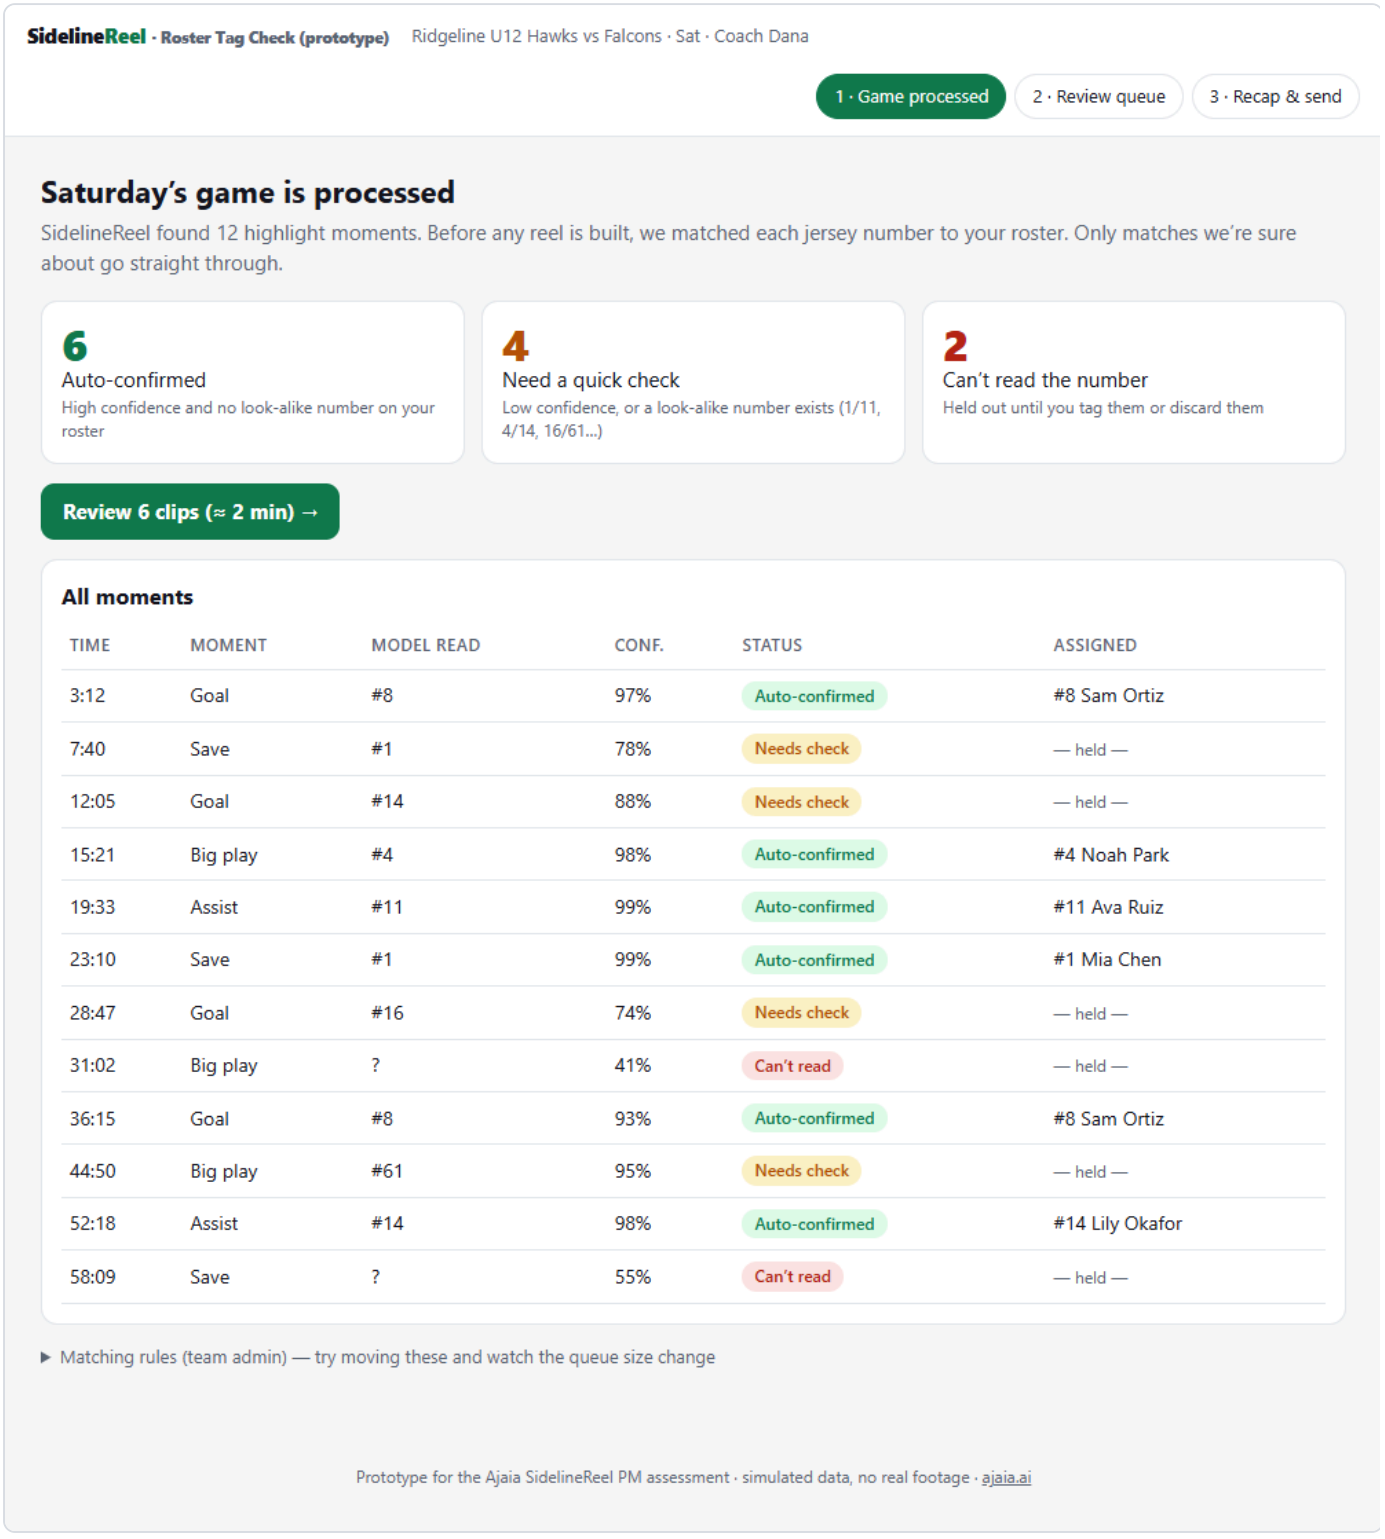

- Step 1 — Open the prototype: "Game processed"
- Step 2 — Open the "Matching rules" panel (optional)
- Step 3 — Try a stricter rule and watch the queue grow
- Step 4 — Put the rule back to 97%
- Step 5 — Start the review queue
- Step 6 — Clip 1 of 6: confirm Mia Chen (#1)
- Step 7 — Clip 2 of 6: confirm Lily Okafor (#14)
- Step 8 — Clip 3 of 6: confirm Ben Walsh (#16)
- Step 9 — Clip 4 of 6: tag an unreadable clip by choosing "Someone else"
- Step 10 — Clip 5 of 6: confirm Omar Haddad (#61)
- Step 11 — Clip 6 of 6: discard a clip
- Step 12 — Recap preview with every clip confirmed
- Step 13 — Simulate a parent report: hover a clip
- Step 14 — After the report: clip removed and sent back to the coach
- Step 15 — The reported clip appears in the review queue
- Step 16 — Coach resolves it, recap is ready again
- Step 17 — Send the recap
- Step 18 — Second scenario: reset the demo

- Step 19 — Jump straight to the recap without reviewing
- Step 20 — The send cutoff passes with clips still held

Part A — Game processed and matching rules

Step 1 — Open the prototype: “Game processed”

You land on screen 1 of 3. Saturday’s game (Ridgeline U12 Hawks vs Falcons, Coach Dana) has already been processed. SidelineReel found 12 highlight moments and, before building any reel, matched each jersey number to the roster.

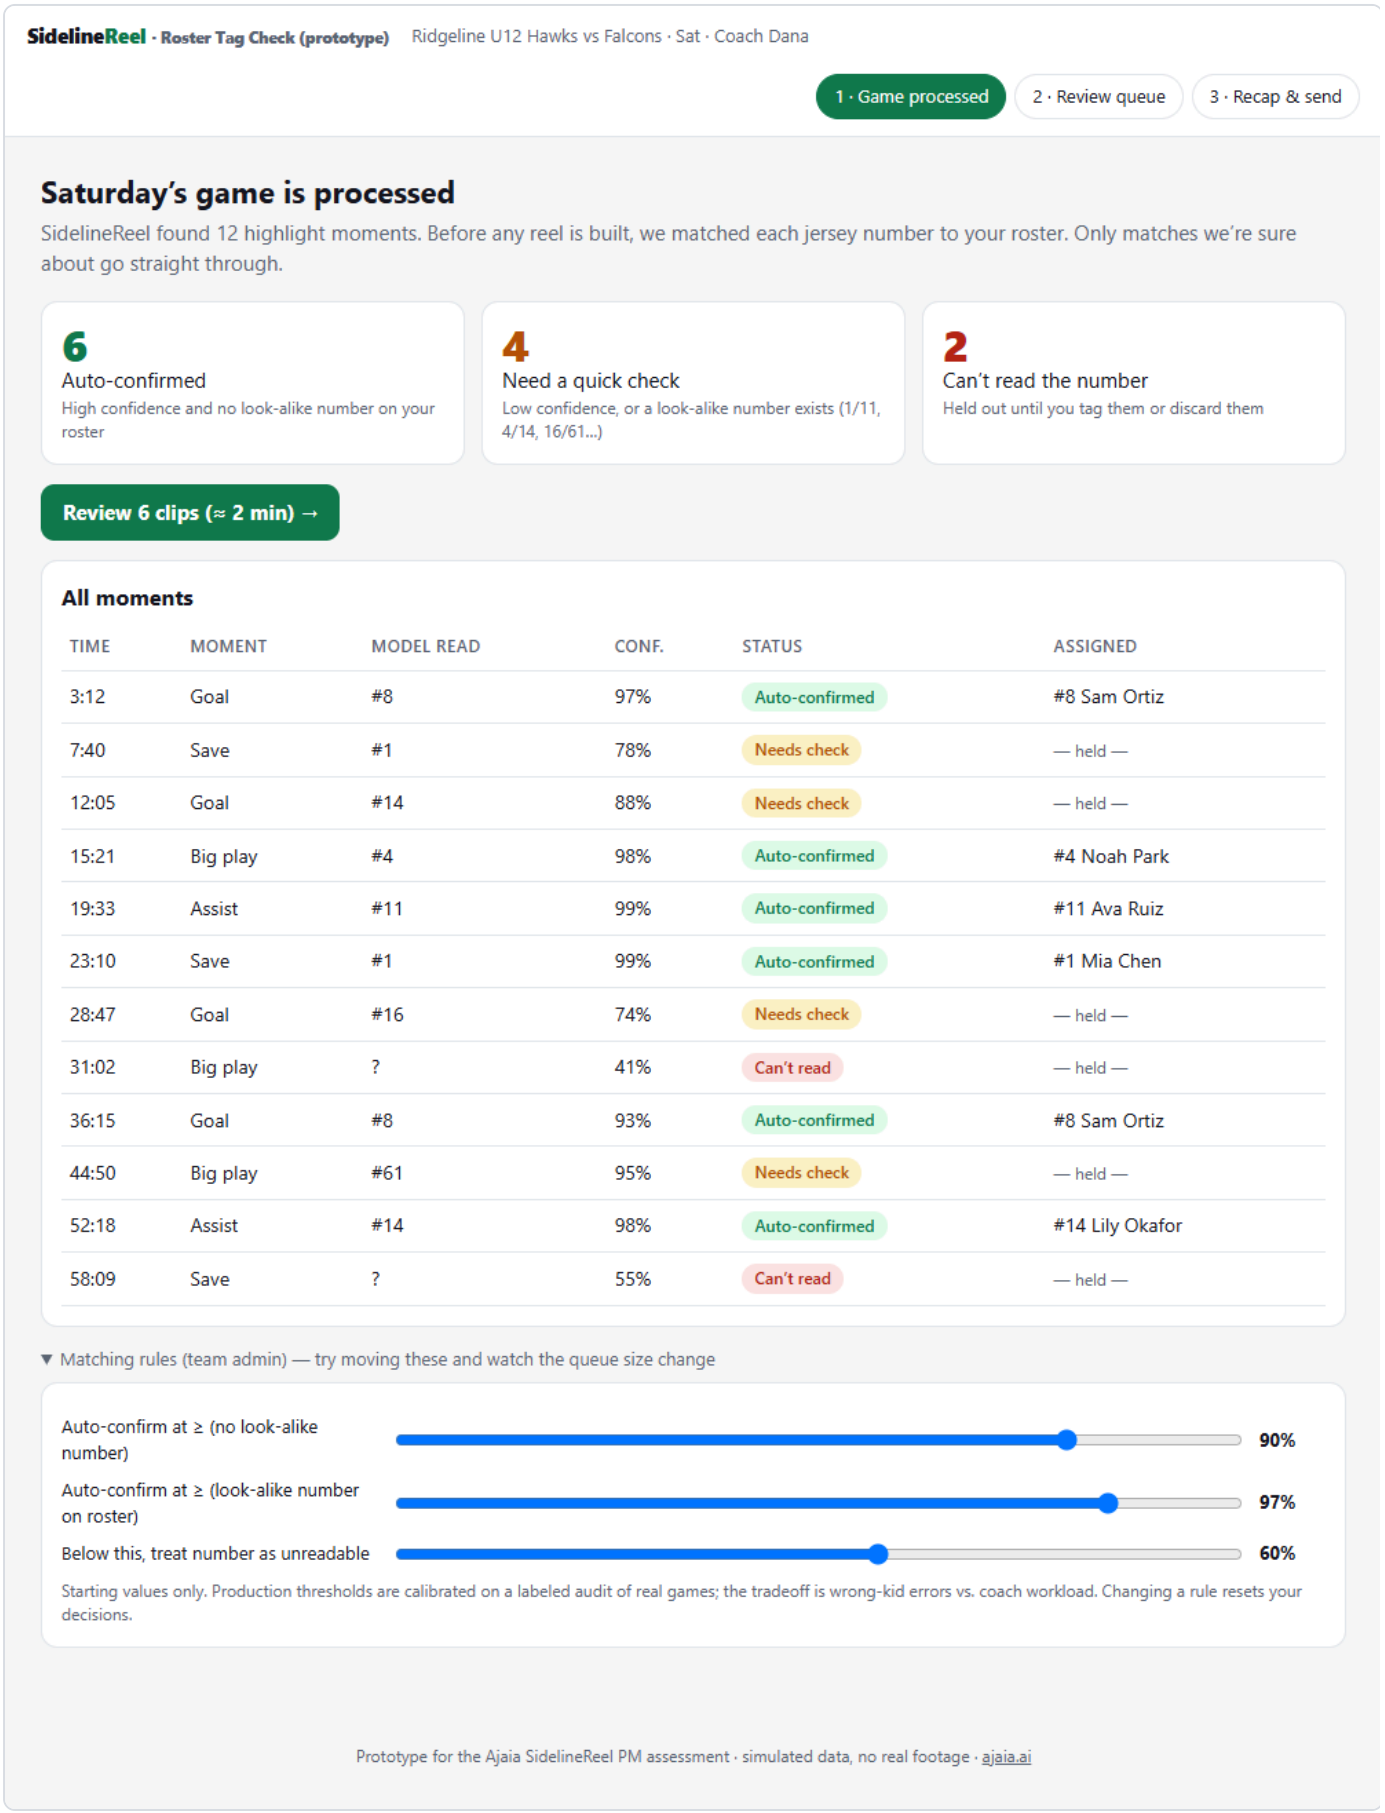

- **Auto-confirmed (6):** the model is confident and no other player on the roster has a look-alike number.
- **Need a quick check (4):** low confidence, or a look-alike number exists (for example 1 vs 11, 4 vs 14, 16 vs 61).
- **Can’t read the number (2):** held out until the coach tags or discards them.

- The table lists every moment with the number the model read, its confidence, its status and who it is assigned to. Anything not auto-confirmed shows "— held —".
- The three step buttons at top right (1 · Game processed, 2 · Review queue, 3 · Recap & send) let you jump between screens at any time.

Step 2 — Open the “Matching rules” panel (optional)

Click “Matching rules (team admin)” below the table. Three sliders control when a clip is trusted automatically. These are starting values only; in production they are calibrated on a labeled audit of real games.

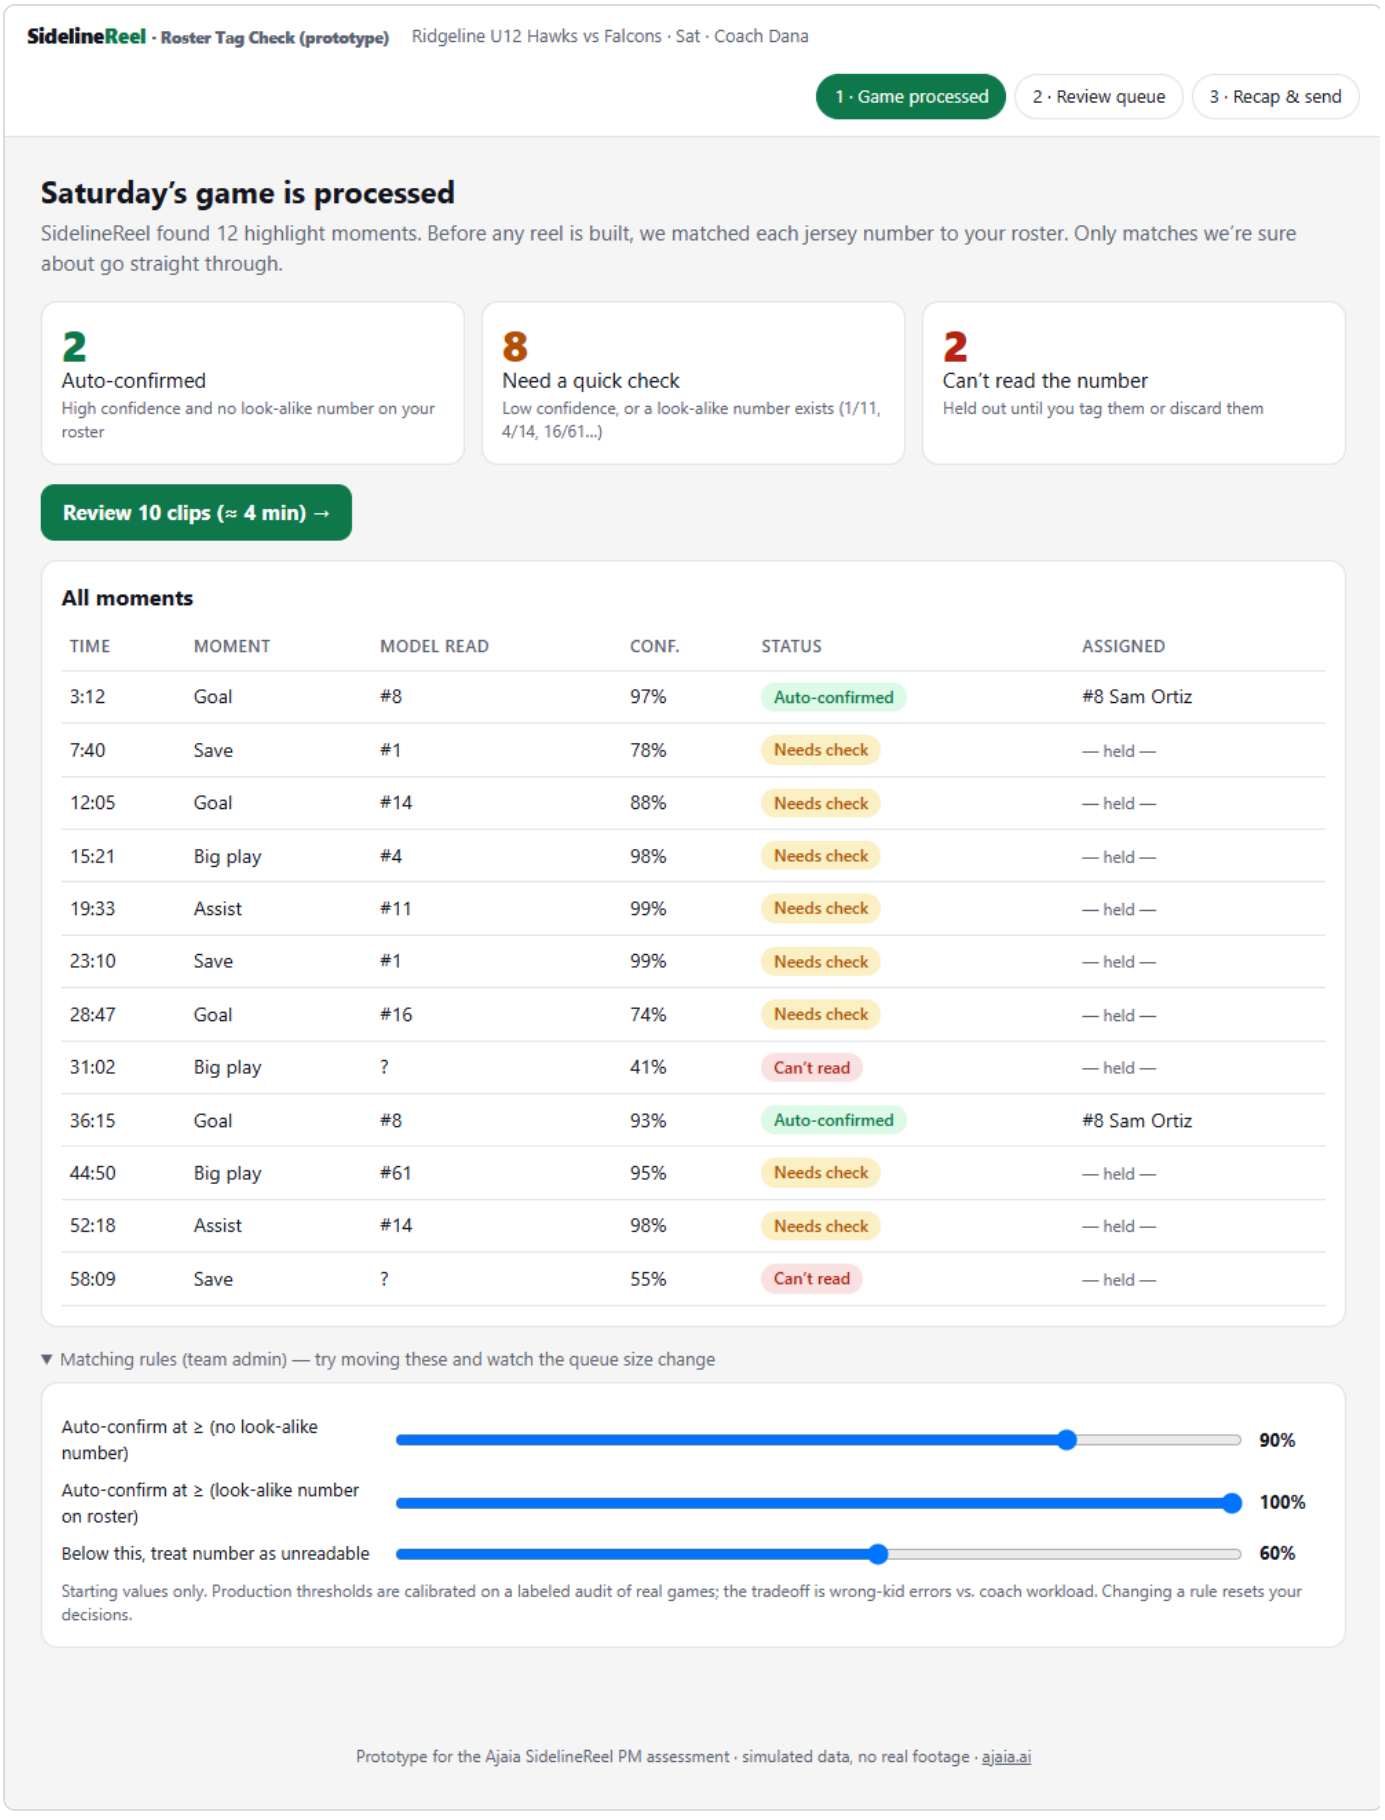

- **Auto-confirm at ≥ 90%** when no look-alike number exists on the roster.
- **Auto-confirm at ≥ 97%** when a look-alike number does exist. This is the stricter bar that targets the 4/14 and 1/11 mix-ups from the support tickets.

- **Unreadable below 60%**: the number is treated as not readable.

Step 3 — Try a stricter rule and watch the queue grow

Drag the look-alike slider up (here to 99.5%). The counts at the top change immediately: more clips fall into “Need a quick check” because fewer clear the bar. Changing a rule also resets any decisions you’ve made.

- This is the core tradeoff the spec is built around: **stricter rules mean fewer wrong-kid clips but more work for the coach**.
- In the real product the right setting is chosen from audit data, and the spec has an alert if too many clips are held.

Step 4 — Put the rule back to 97%

Set the look-alike slider back to 97% (or click “Reset demo” later) so the rest of the walkthrough matches these screenshots: 6 auto-confirmed, 4 need a check, 2 can’t be read.

SidelineReel · **Roster Tag Check (prototype)** Ridgeline U12 Hawks vs Falcons · Sat · Coach Dana

1 · Game processed | 2 · Review queue | 3 · Recap & send

Saturday's game is processed

SidelineReel found 12 highlight moments. Before any reel is built, we matched each jersey number to your roster. Only matches we're sure about go straight through.

6
Auto-confirmed
High confidence and no look-alike number on your roster

4
Need a quick check
Low confidence, or a look-alike number exists (1/11, 4/14, 16/61…)

2
Can't read the number
Held out until you tag them or discard them

Review 6 clips (≈ 2 min) →

All moments

TIME	MOMENT	MODEL READ	CONF.	STATUS	ASSIGNED
3:12	Goal	#8	97%	Auto-confirmed	#8 Sam Ortiz
7:40	Save	#1	78%	Needs check	— held —
12:05	Goal	#14	88%	Needs check	— held —
15:21	Big play	#4	98%	Auto-confirmed	#4 Noah Park
19:33	Assist	#11	99%	Auto-confirmed	#11 Ava Ruiz
23:10	Save	#1	99%	Auto-confirmed	#1 Mia Chen
28:47	Goal	#16	74%	Needs check	— held —
31:02	Big play	?	41%	Can't read	— held —
36:15	Goal	#8	93%	Auto-confirmed	#8 Sam Ortiz
44:50	Big play	#61	95%	Needs check	— held —
52:18	Assist	#14	98%	Auto-confirmed	#14 Lily Okafor
58:09	Save	?	55%	Can't read	— held —

▼ Matching rules (team admin) — try moving these and watch the queue size change

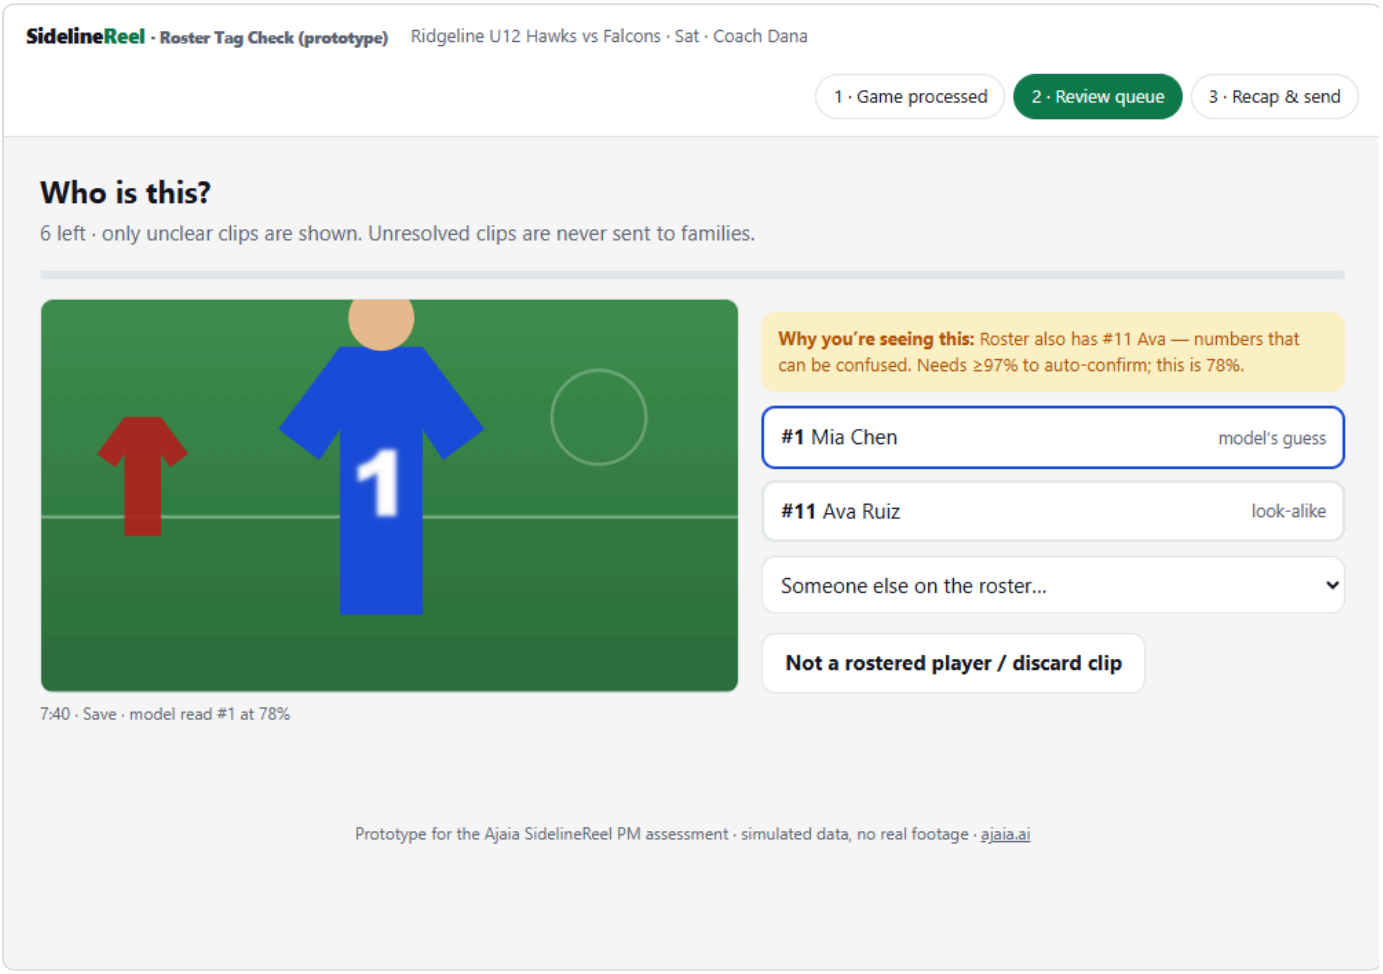

Starting values only. Production thresholds are calibrated on a labeled audit of real games; the tradeoff is wrong-kid errors vs. coach workload. Changing a rule resets your decisions.

Part B — The coach review queue

Step 5 — Start the review queue

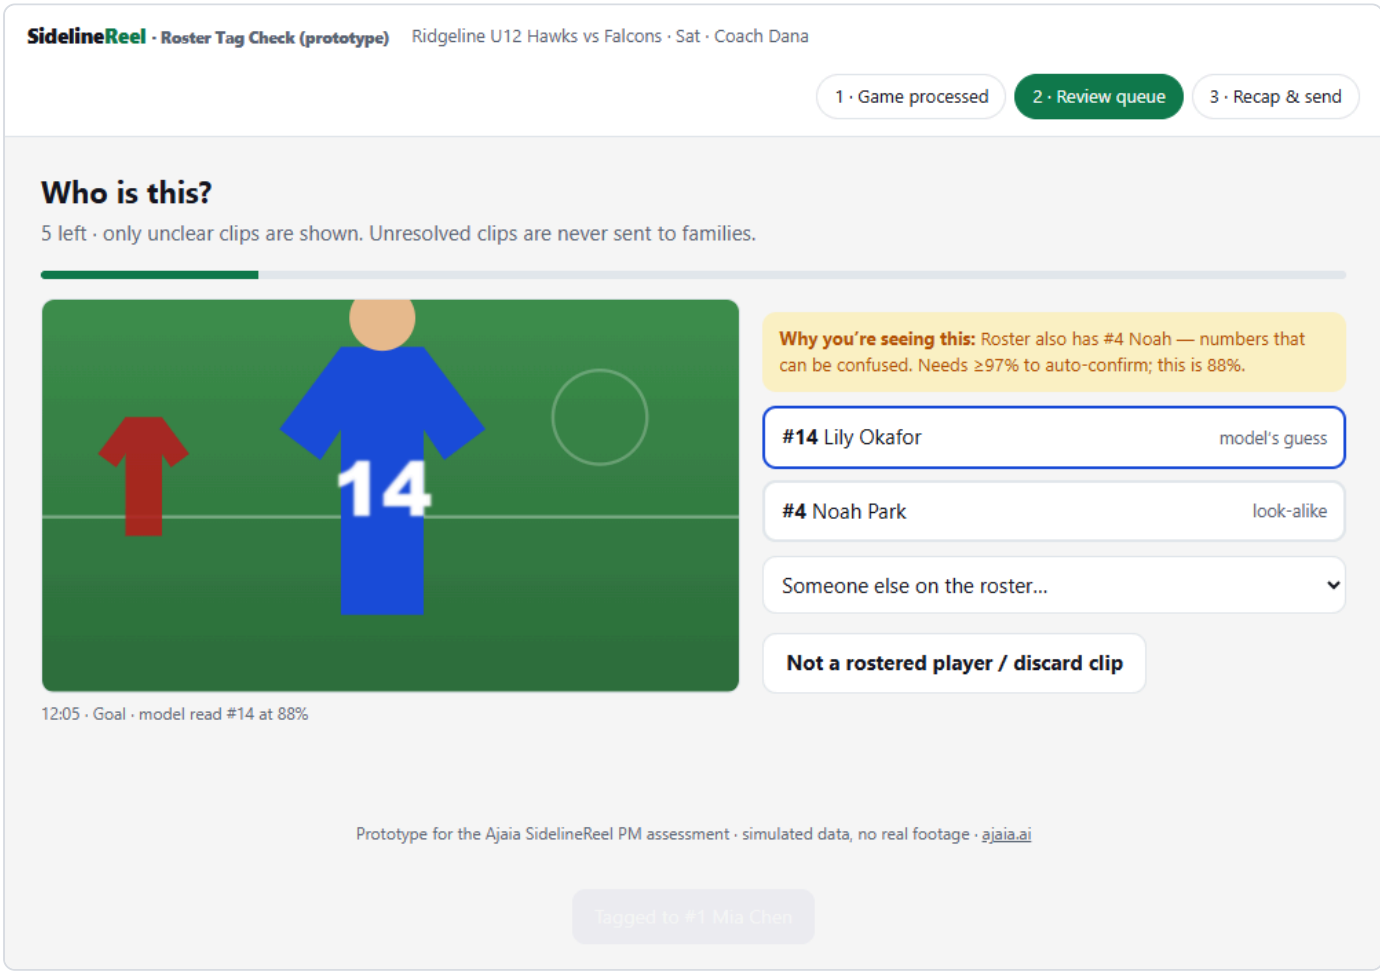

Click “Review 6 clips”. Screen 2 shows one unclear clip at a time with a progress bar. A still frame from the footage is on the left; the decision panel is on the right.

- The yellow box explains **why you’re seeing this clip**. Here the model read #1 at 78%, and the roster also contains #11 — numbers that can be confused.
- The candidate buttons list the model’s guess (blue border, labeled “model’s guess”) plus look-alike players from the roster.
- “Someone else on the roster…” lets the coach pick any other player; “Not a rostered player / discard clip” removes the clip.
- Nothing unresolved is ever sent to families.

Step 6 — Clip 1 of 6: confirm Mia Chen (#1)

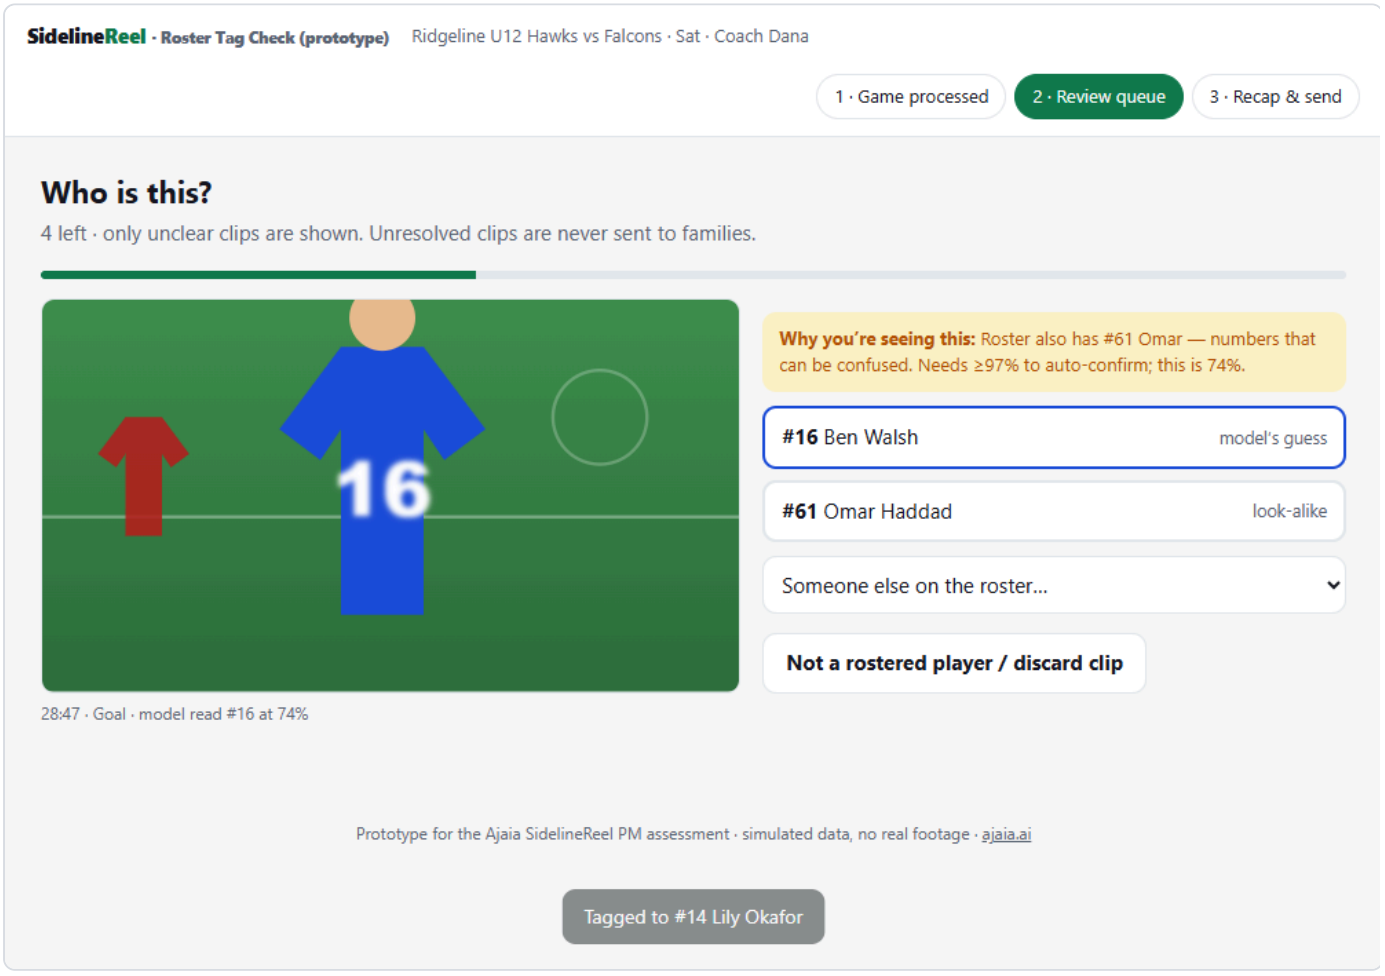

The coach looks at the frame and clicks "#1 Mia Chen". A toast confirms the tag, the progress bar moves, and the next clip appears.

- This is the next clip: a goal read as #14 at 88%. Because #4 is on the roster (14 contains 4), the clip needs a check. The candidates are Lily Okafor (#14, the model's guess) and Noah Park (#4, the look-alike).
- This is the exact mix-up in the Ridgeline parent's ticket: a 14 shown as a 4.

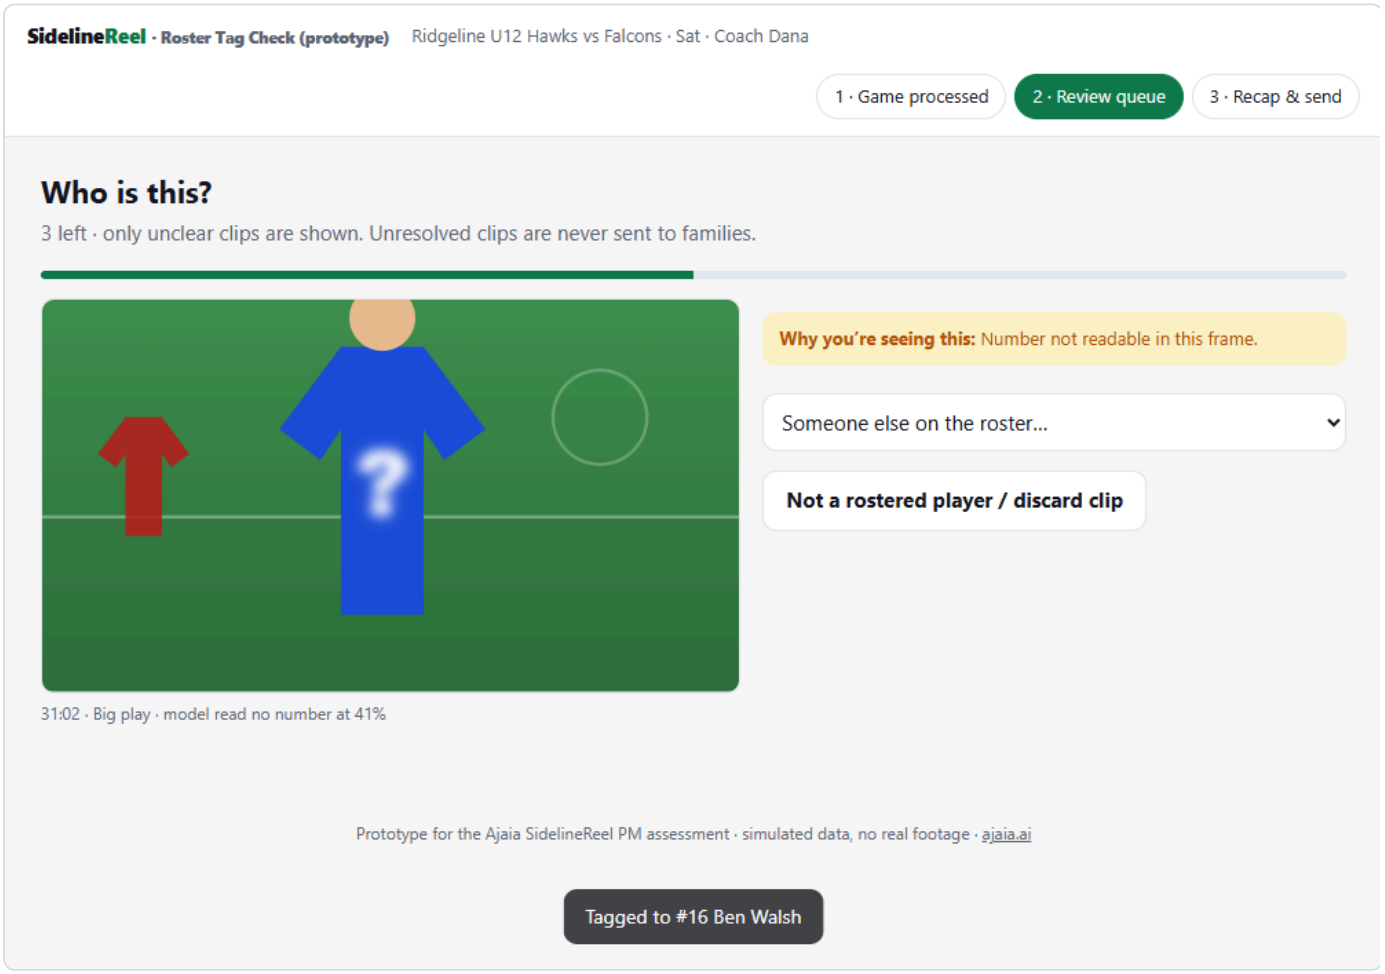

Step 7 — Clip 2 of 6: confirm Lily Okafor (#14)

The coach confirms #14 Lily Okafor. The next flagged clip is a goal read as #16 at 74%, with #61 on the roster (swapped digits).

Step 8 — Clip 3 of 6: confirm Ben Walsh (#16)

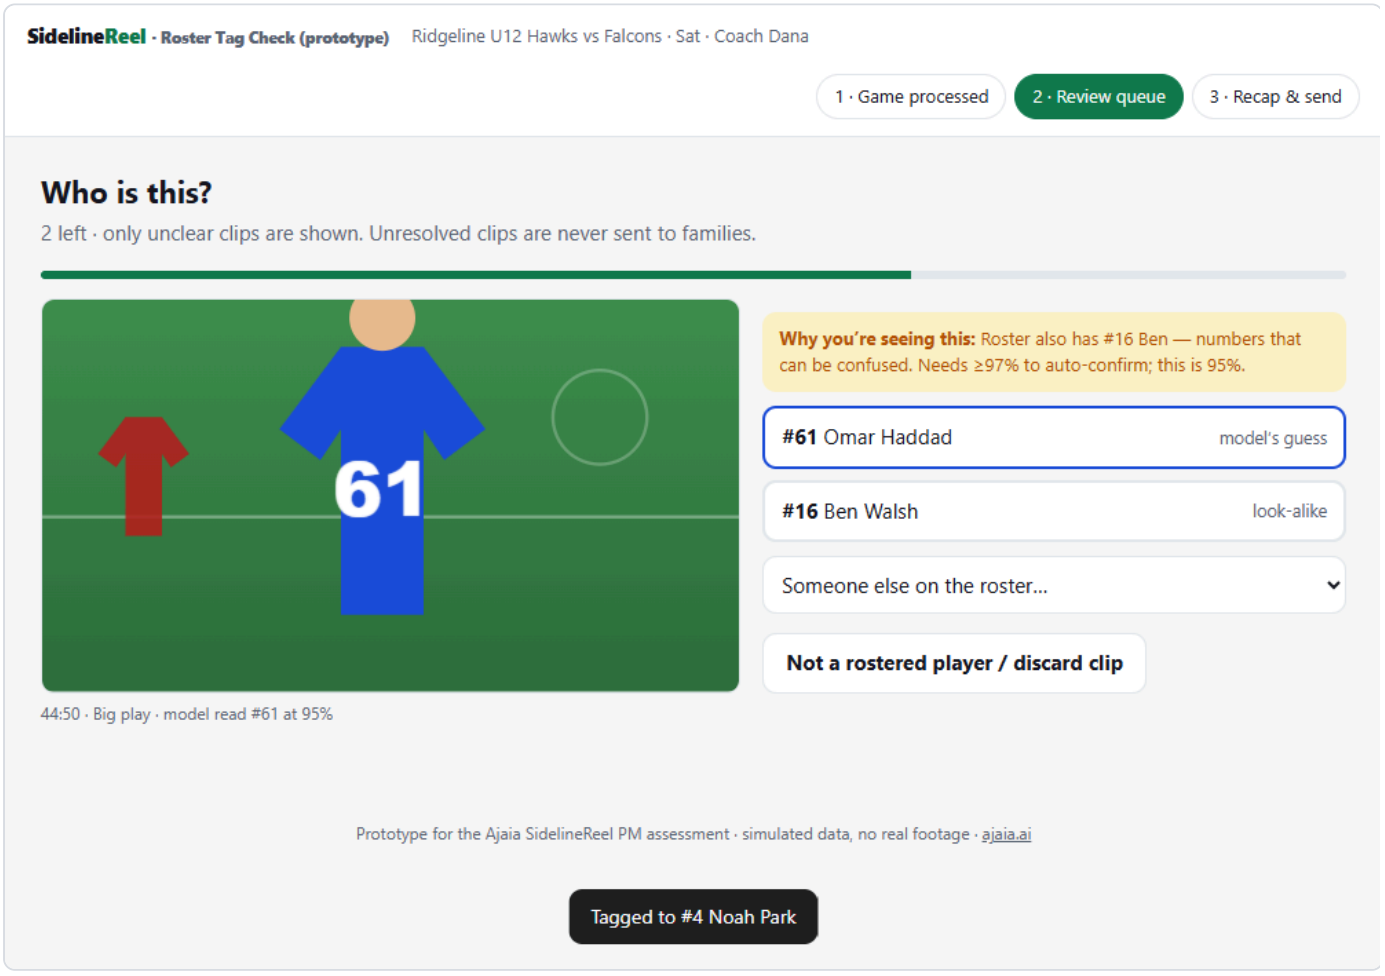

Next is a clip where the number could not be read at all (the digits are blurred). There are no candidate buttons because the model has no guess; the coach uses the dropdown or discards.

- The blur in the frame reflects the low confidence. The yellow box says “Number not readable in this frame.”

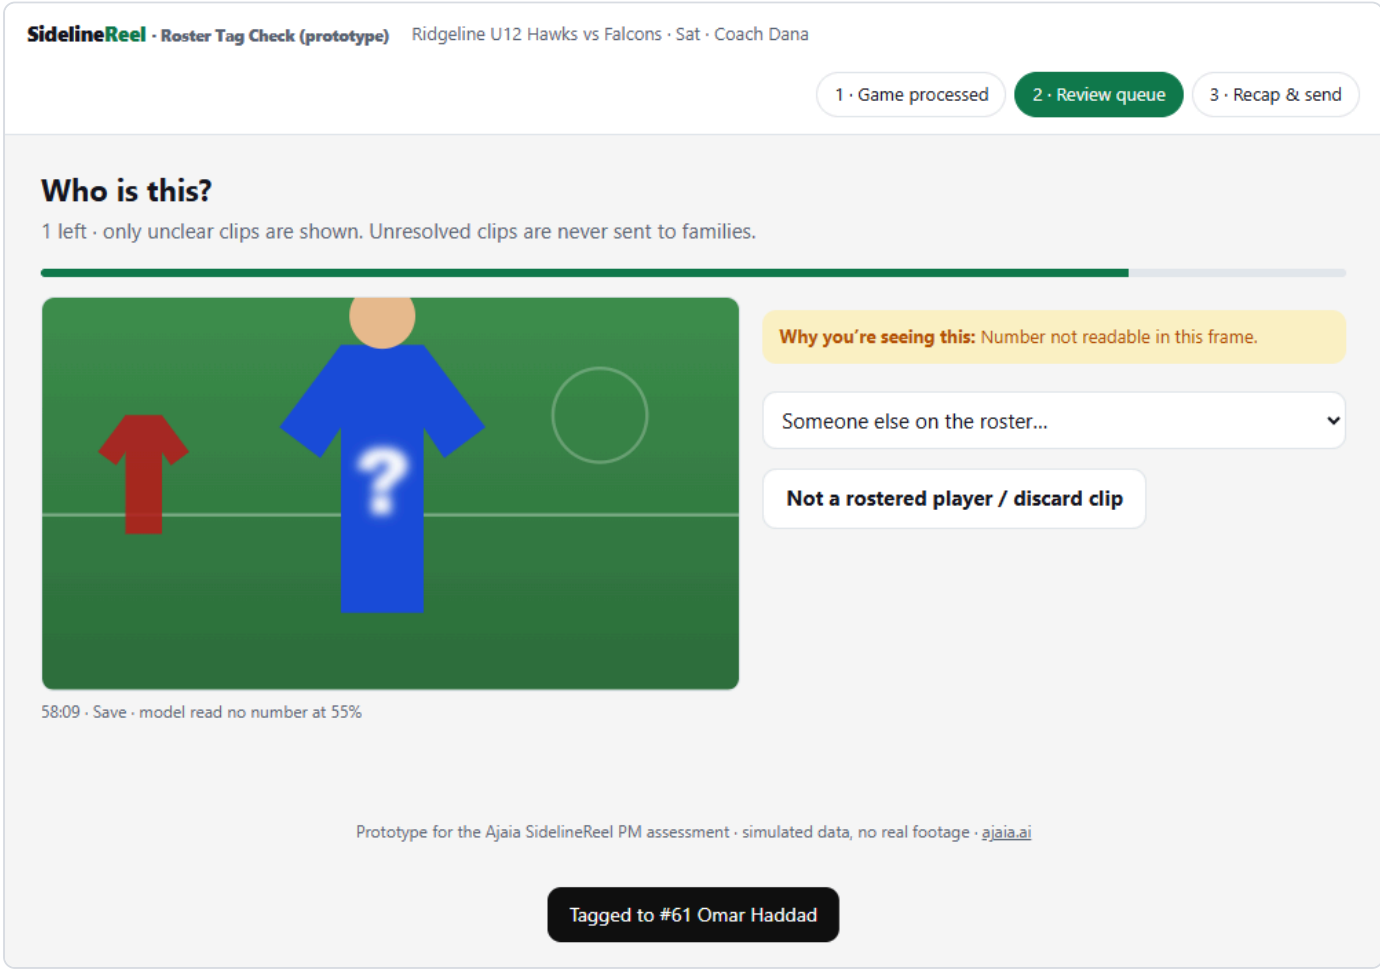

Step 9 — Clip 4 of 6: tag an unreadable clip by choosing “Someone else”

The coach recognises the play, opens the dropdown and picks #4 Noah Park. This shows the manual path for clips the model could not read. The next clip is a big play read as #61 at 95%, flagged because #16 is on the roster.

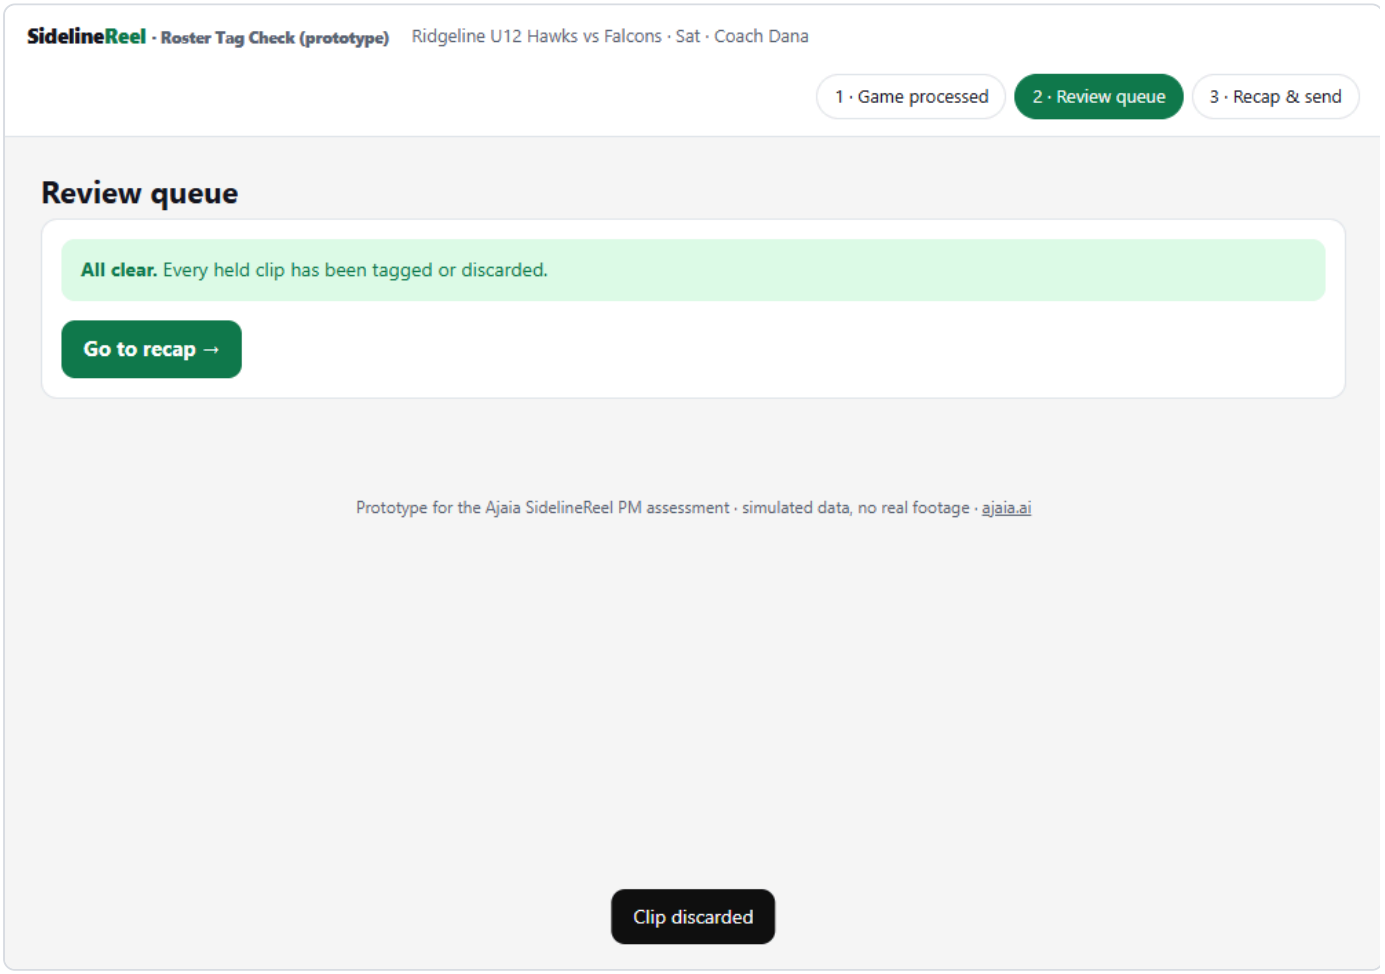

Step 10 — Clip 5 of 6: confirm Omar Haddad (#61)

The coach confirms #61. The last clip is another unreadable one (55% confidence).

Step 11 — Clip 6 of 6: discard a clip

The coach cannot tell who it is, so they click “Not a rostered player / discard clip”. The queue is now empty and shows an “All clear” banner with a button to continue.

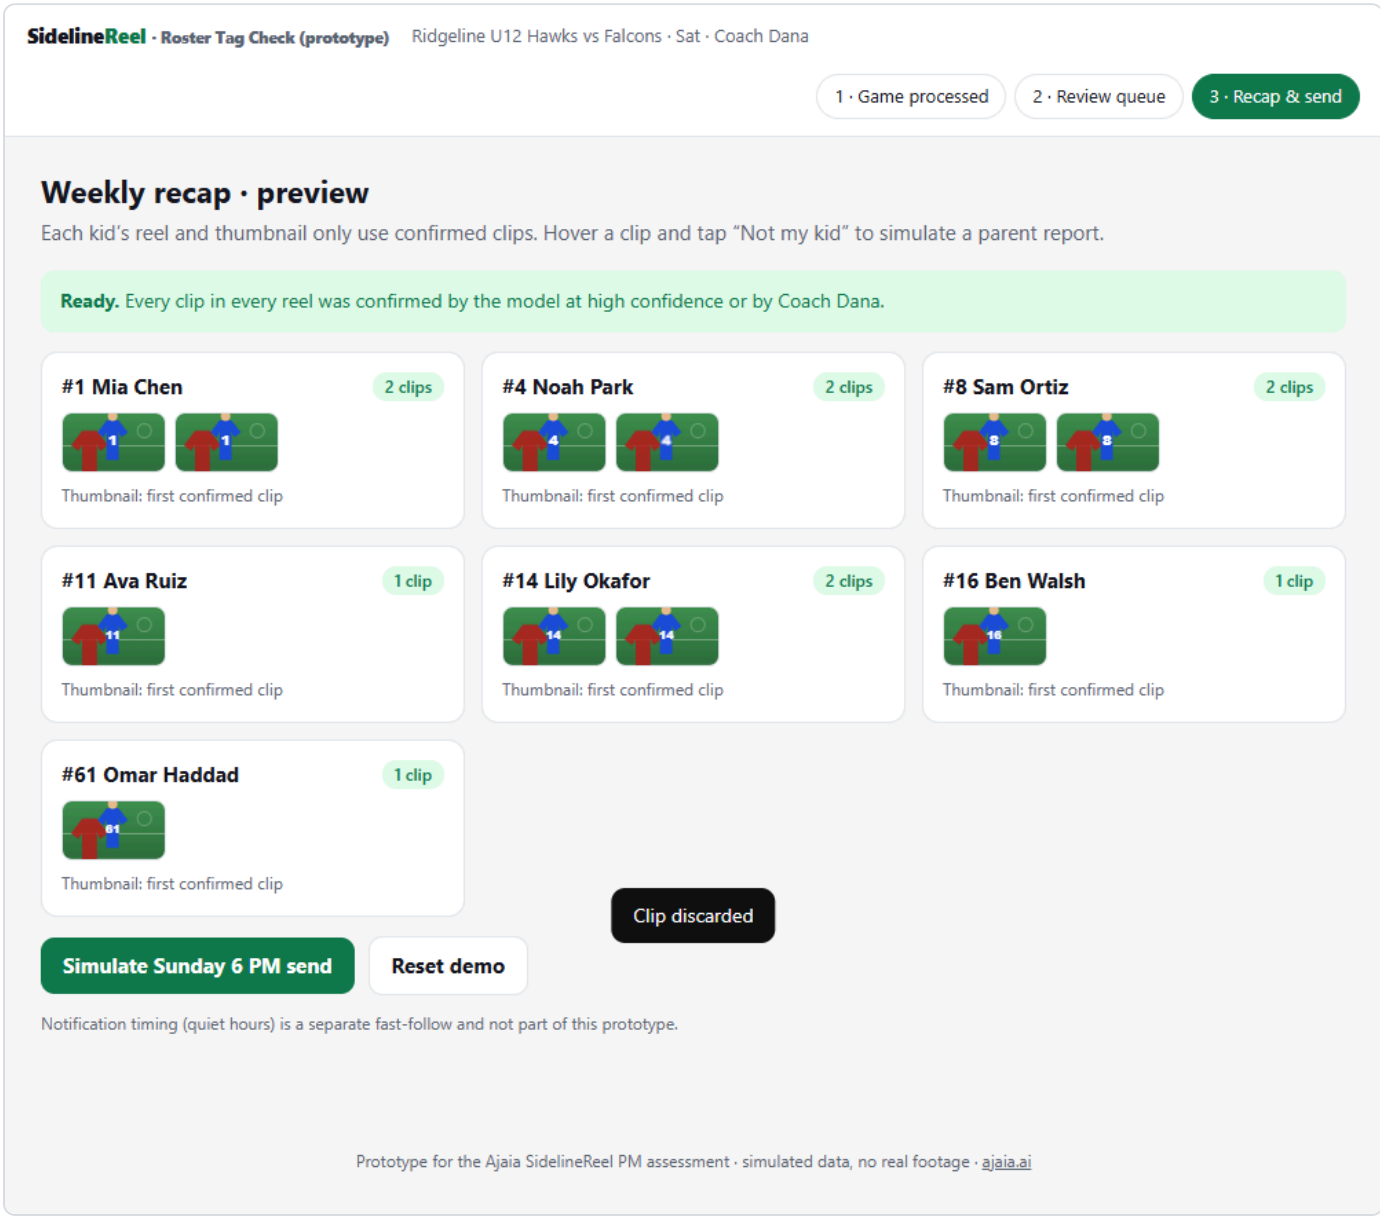

- Discarding is a legitimate outcome: a missing clip is better than a wrong-kid clip.

Part C — Recap, parent report and send

Step 12 — Recap preview with every clip confirmed

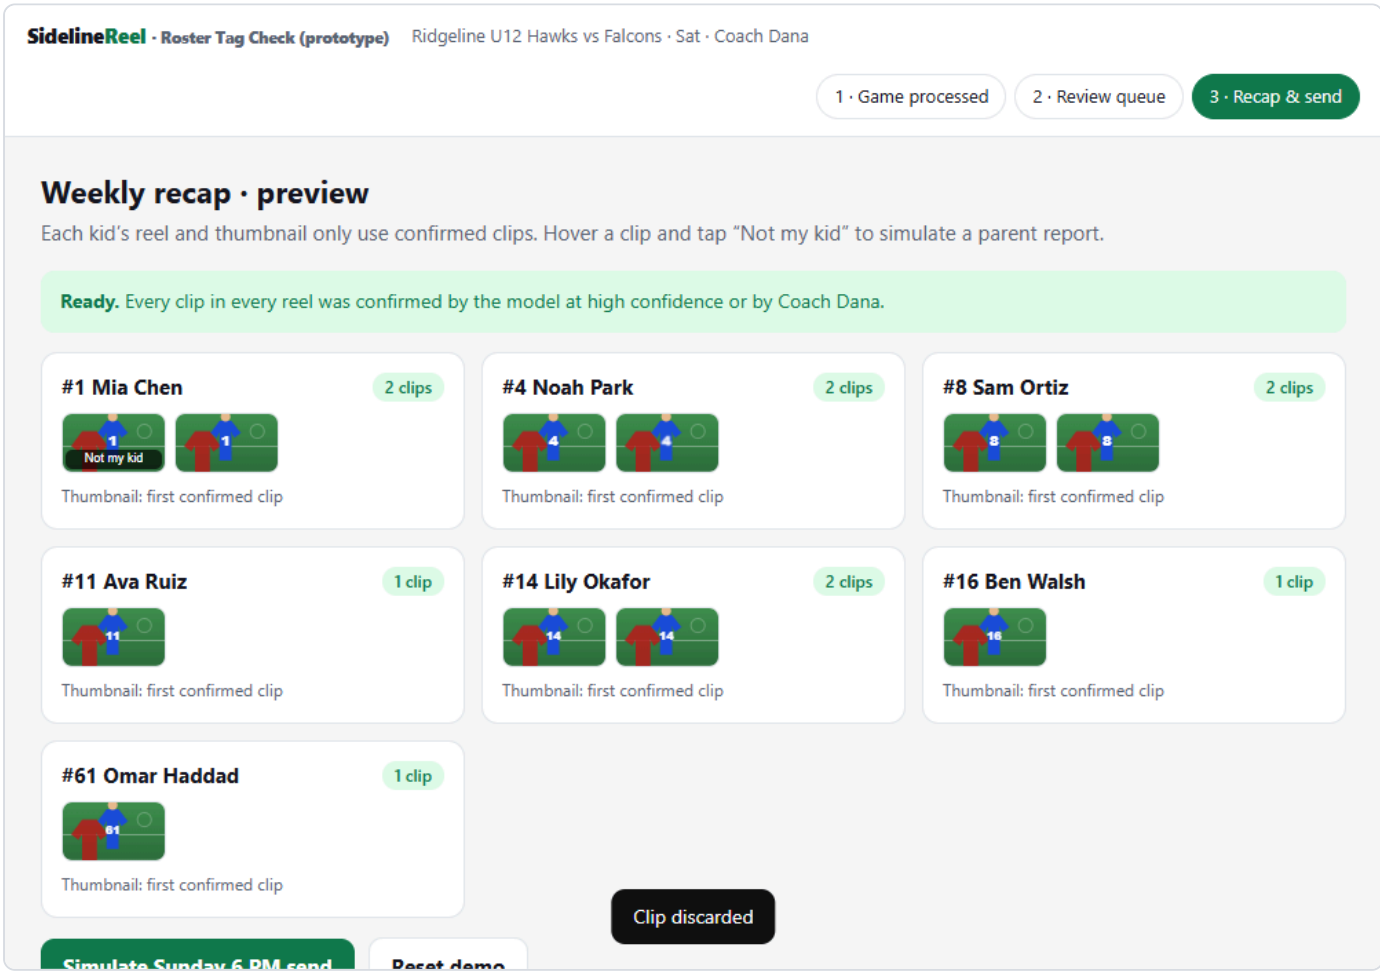

Screen 3 shows the weekly recap. Each player's card shows how many confirmed clips are in their reel and thumbnails of those clips. The green banner reads "Ready."

- Reels and thumbnails are built **only from confirmed clips** — this is what stops the wrong-kid thumbnail from being shown.
- A player with no confirmed clips (for example Omar if his clip were unresolved) would get a short "no highlights this week" note instead of a reel.

Step 13 — Simulate a parent report: hover a clip

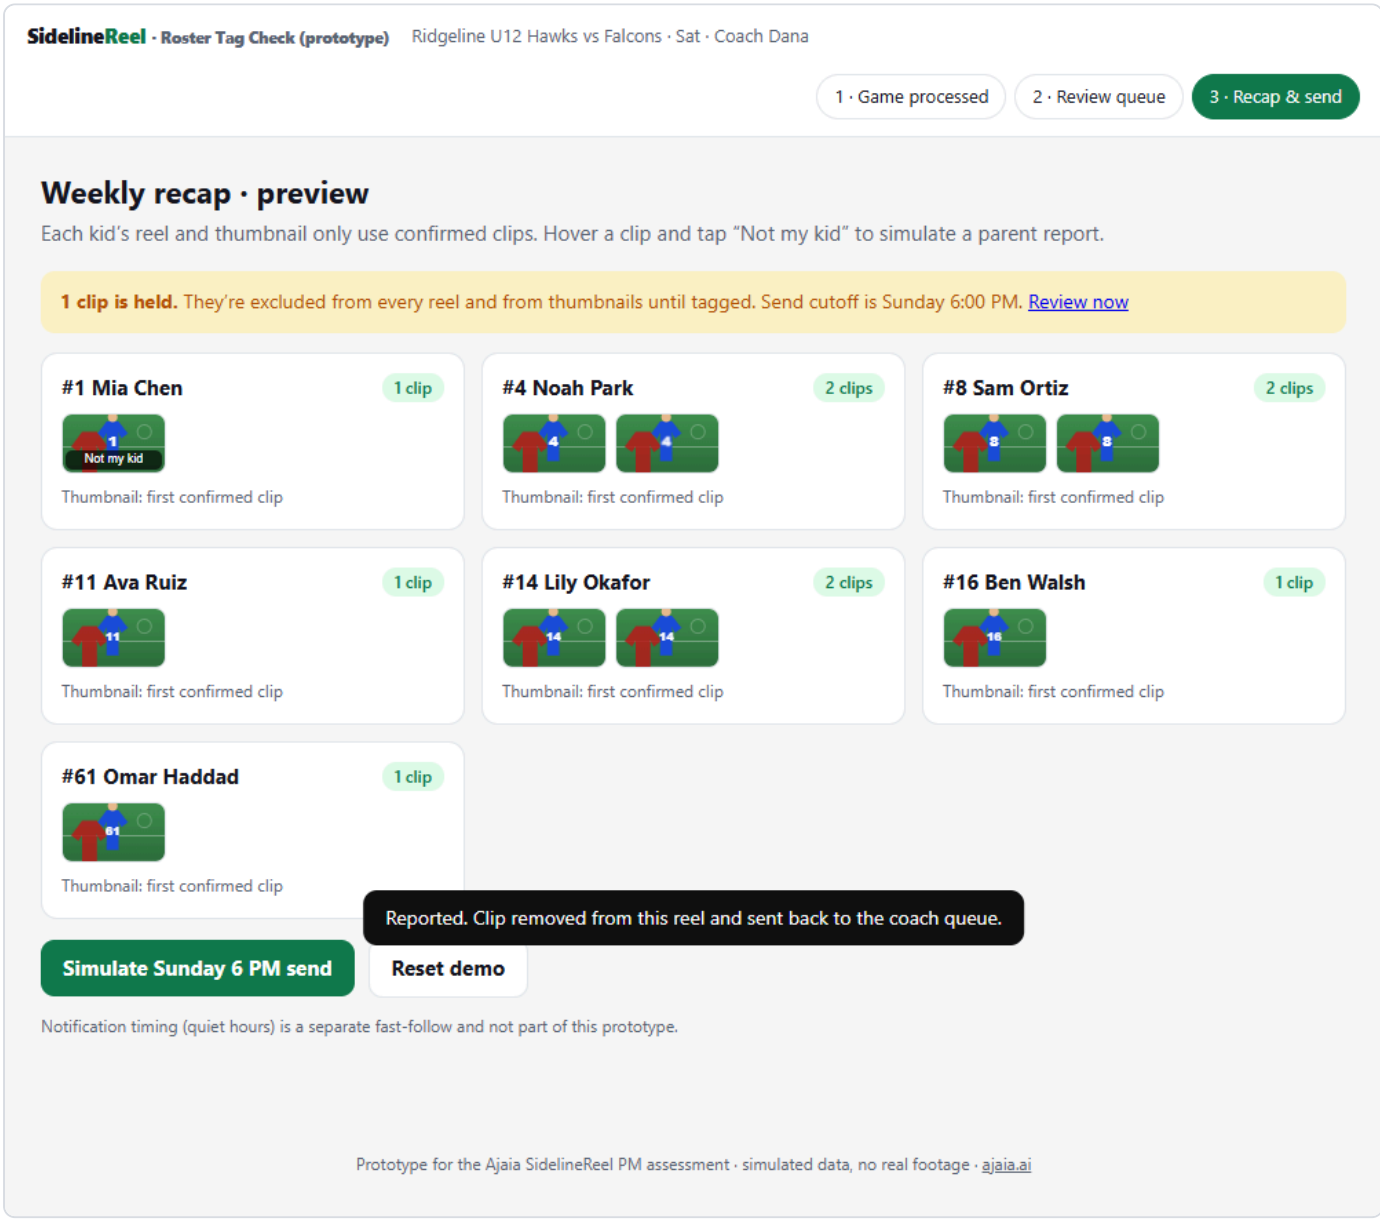

Hover over any thumbnail in a reel. A “Not my kid” button appears at the bottom of the thumbnail. This is what a parent would tap if a clip in their child’s reel is someone else.

- Parents are the last safety net for mistakes the model was confident about.

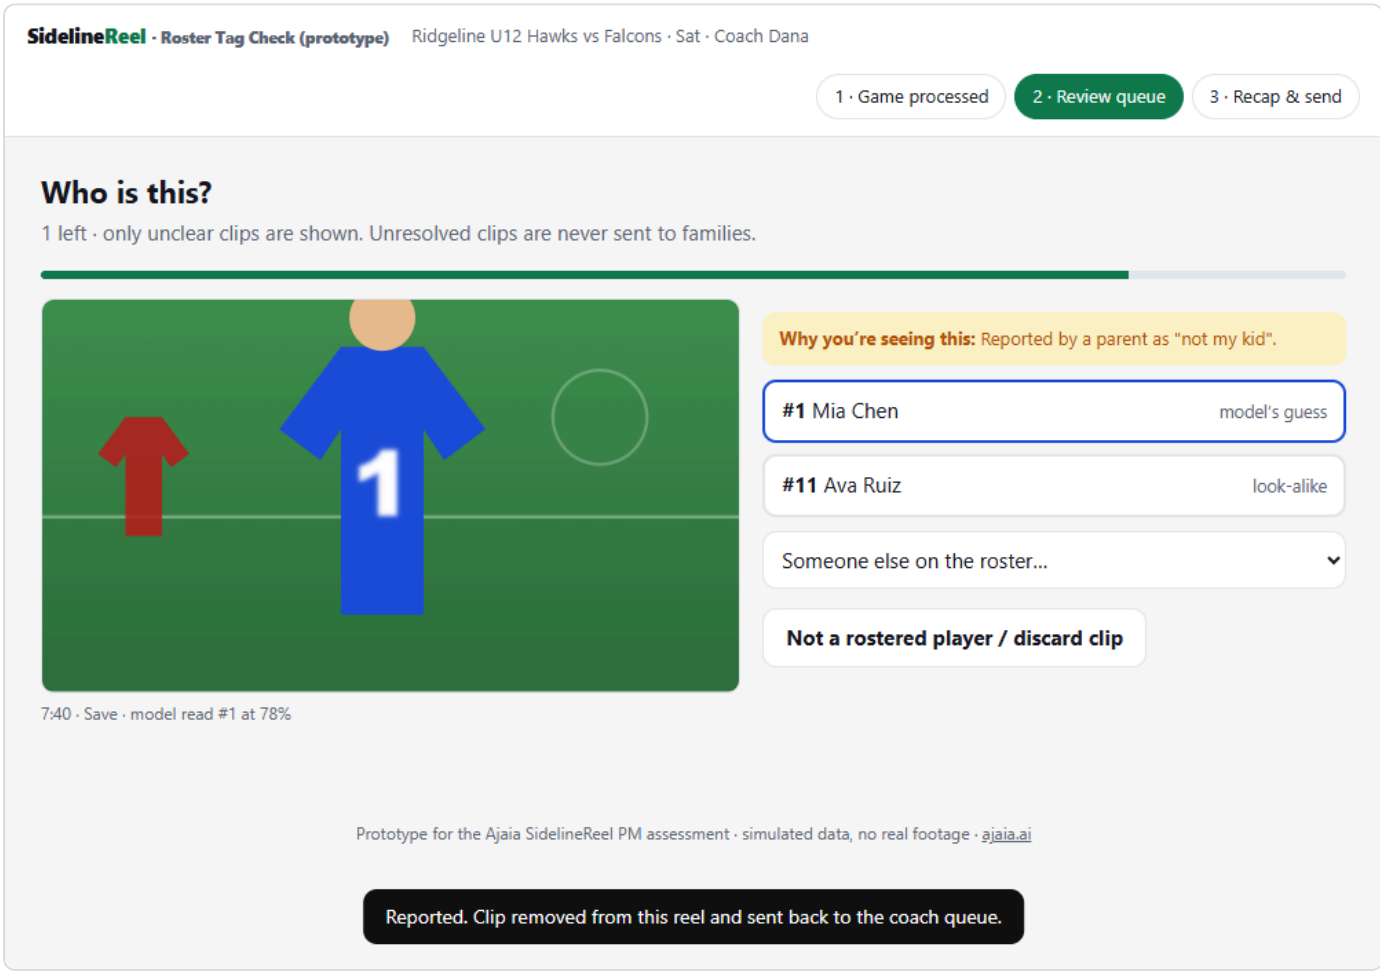

Step 14 — After the report: clip removed and sent back to the coach

Clicking “Not my kid” removes the clip from that reel immediately, and the banner changes to show a clip is held again. The clip returns to the coach’s queue with the reason “Reported by a parent as ‘not my kid’.”

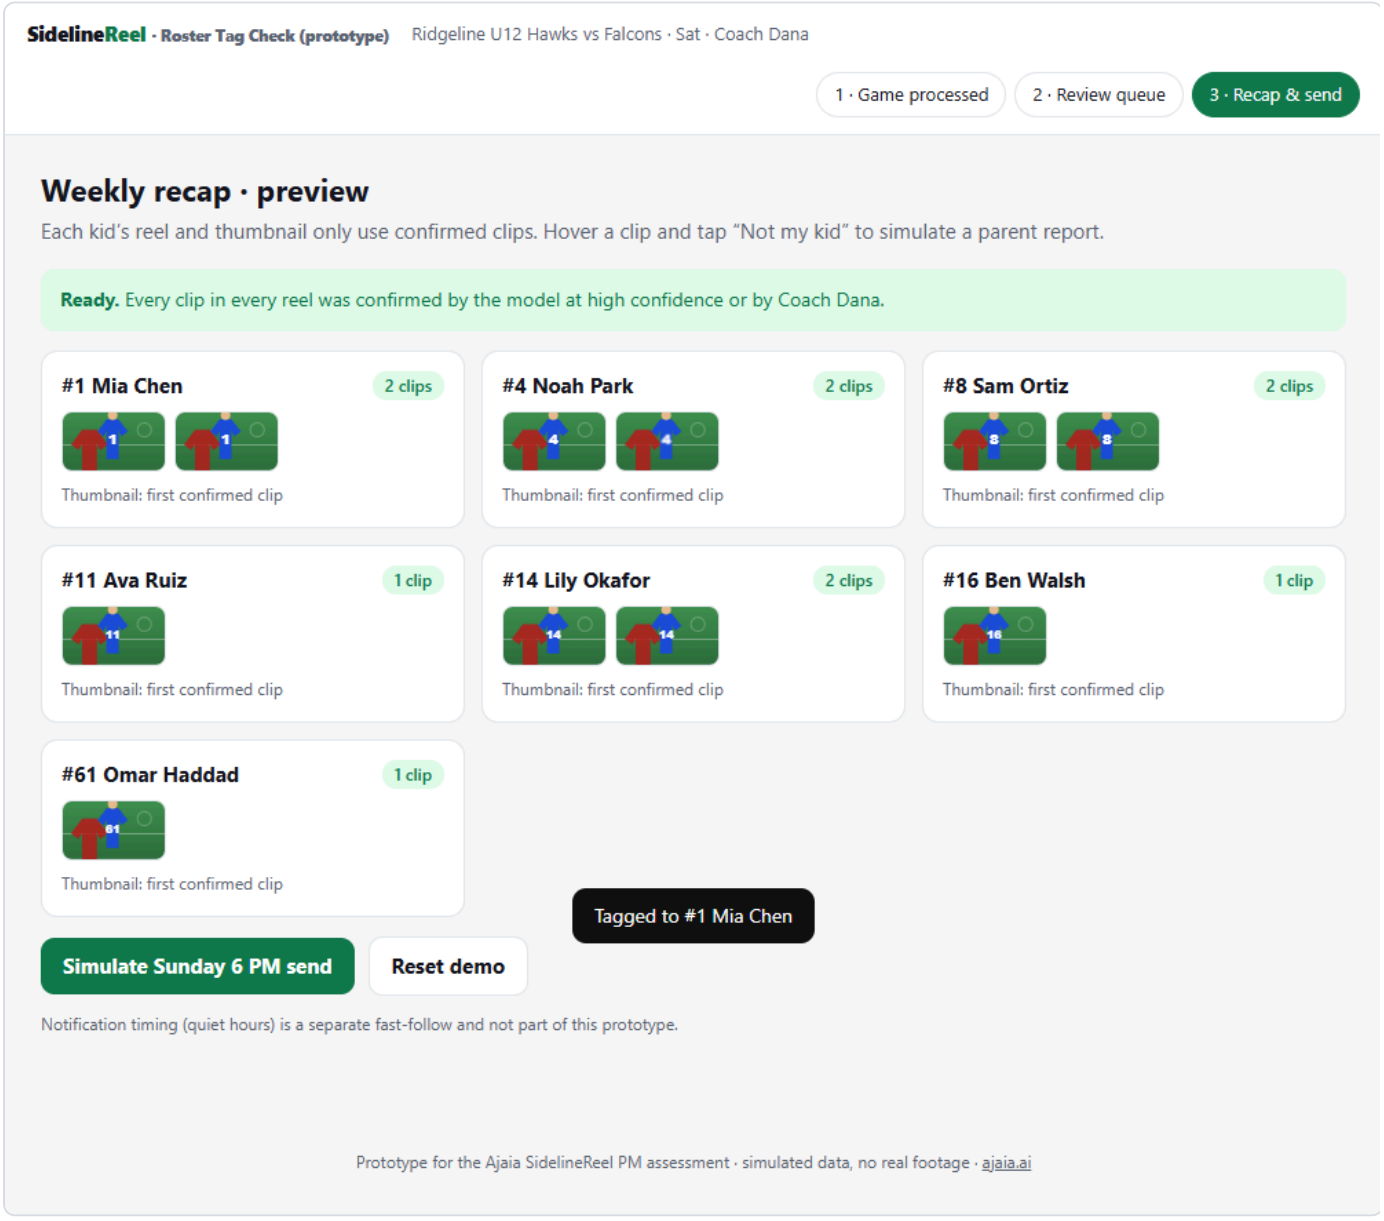

Step 15 — The reported clip appears in the review queue

Clicking “Review now” in the banner opens the queue. The reported clip is shown with a yellow reason box. The coach decides again.

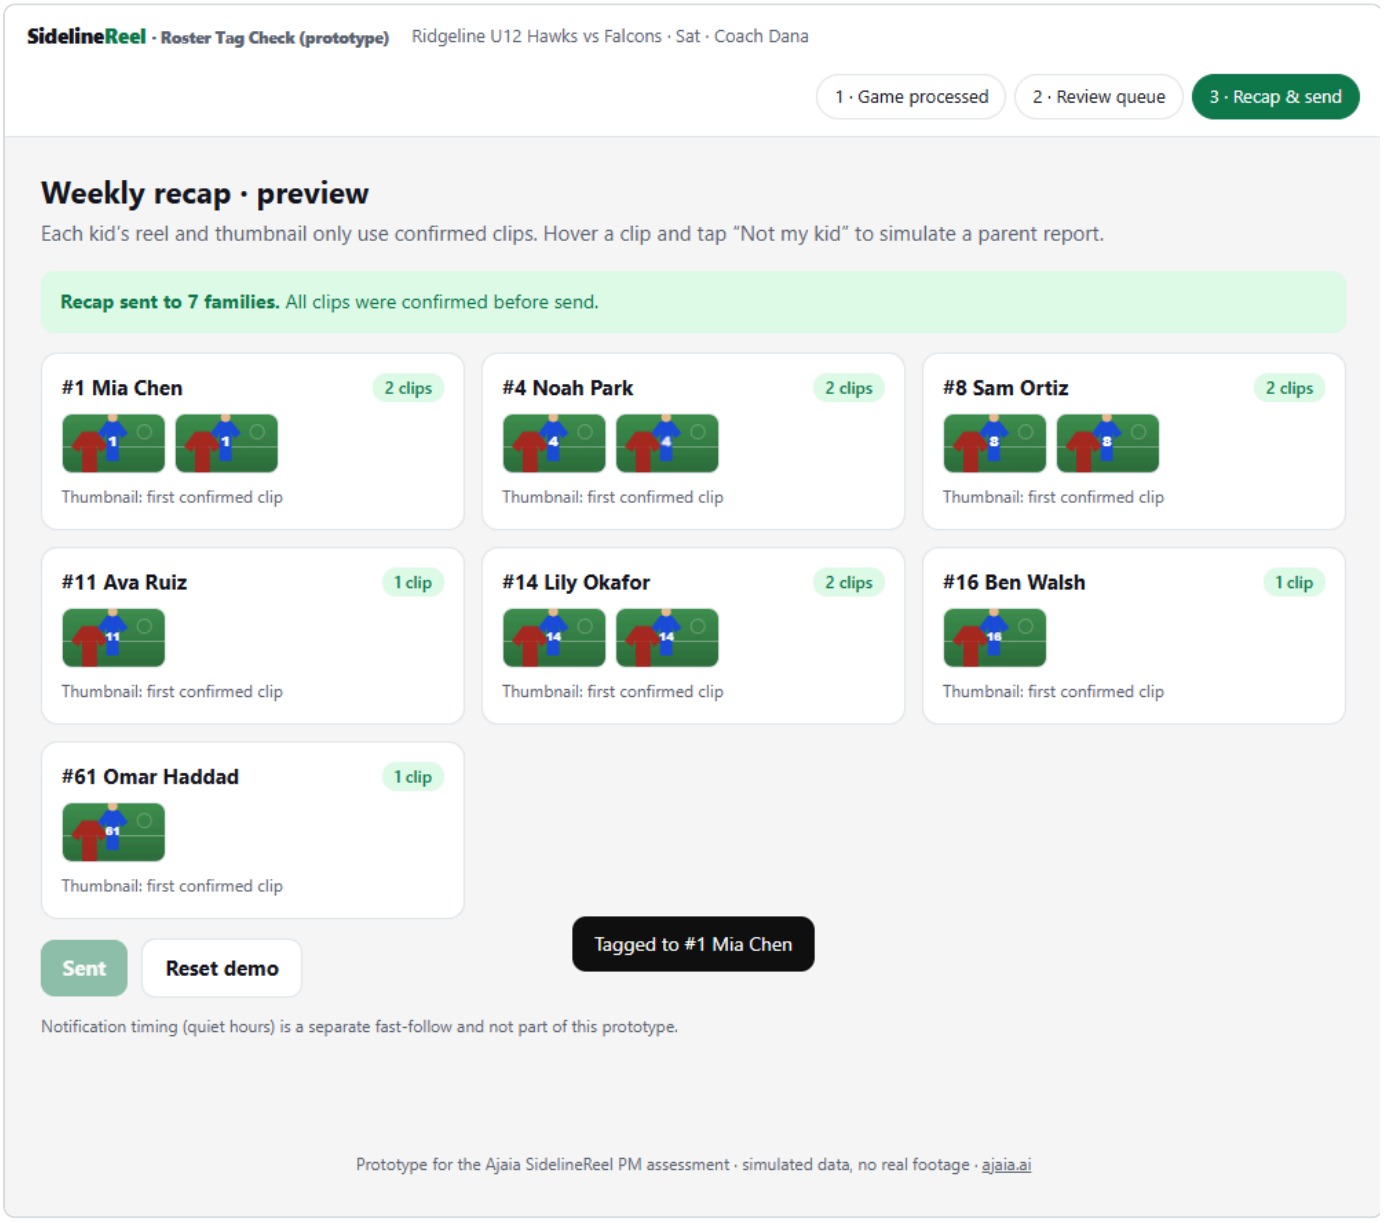

Step 16 — Coach resolves it, recap is ready again

The coach picks the correct player and returns to the recap. The banner is green again.

Step 17 — Send the recap

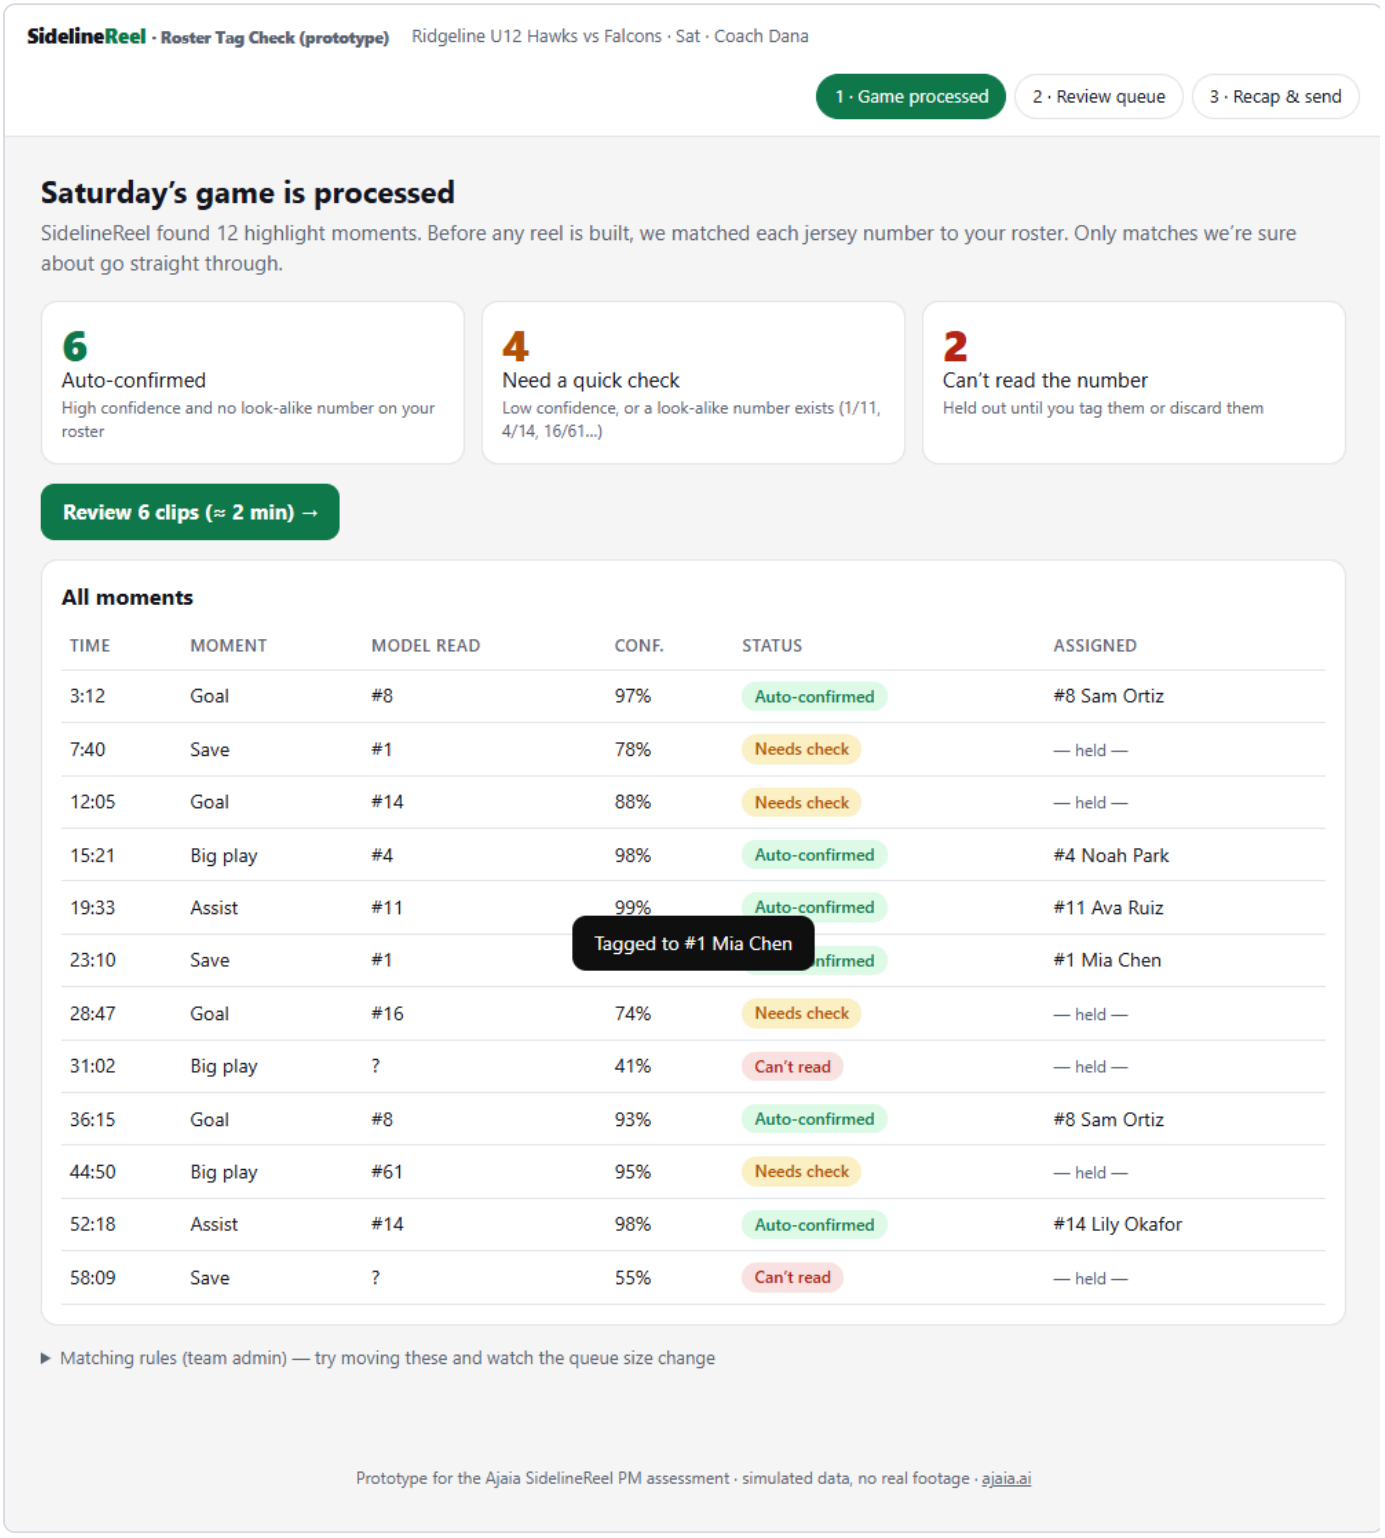

Click “Simulate Sunday 6 PM send”. The banner confirms how many families received a recap and the button changes to “Sent”. The “Not my kid” buttons disappear because the recap is out.

Part D — Second scenario: the coach does nothing

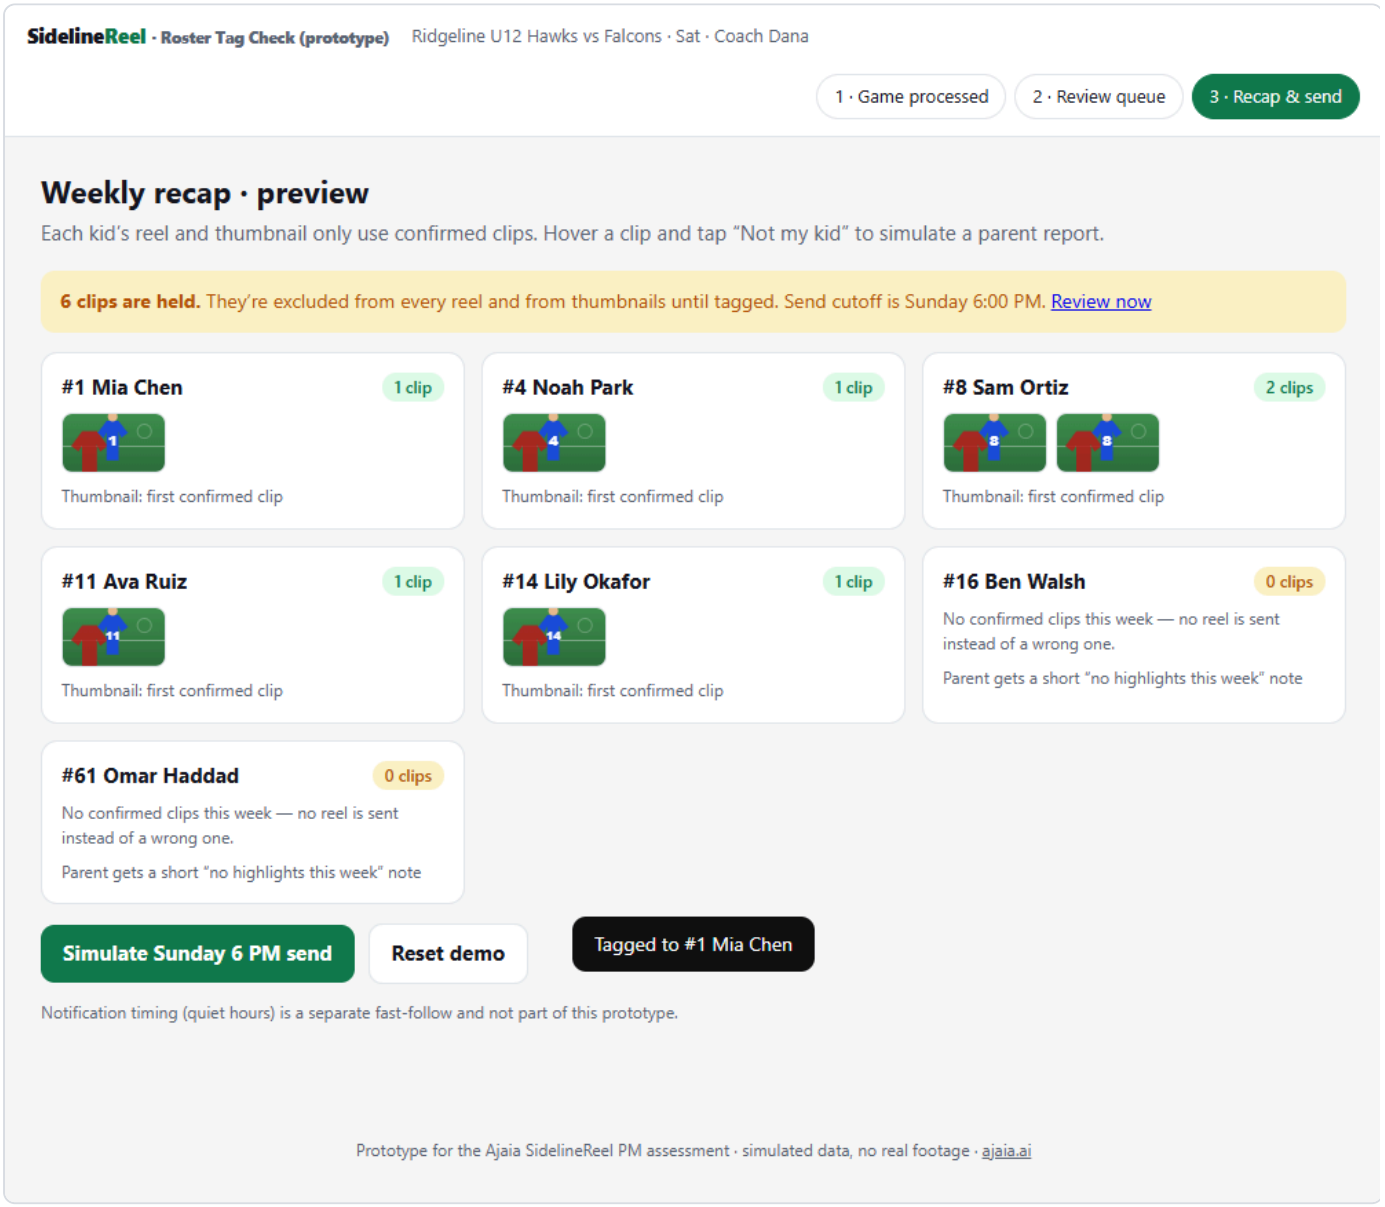

Step 18 — Second scenario: reset the demo

Click “Reset demo”. All decisions are cleared and you are back on screen 1. This time we’ll show what happens if the coach does **nothing**.

Step 19 — Jump straight to the recap without reviewing

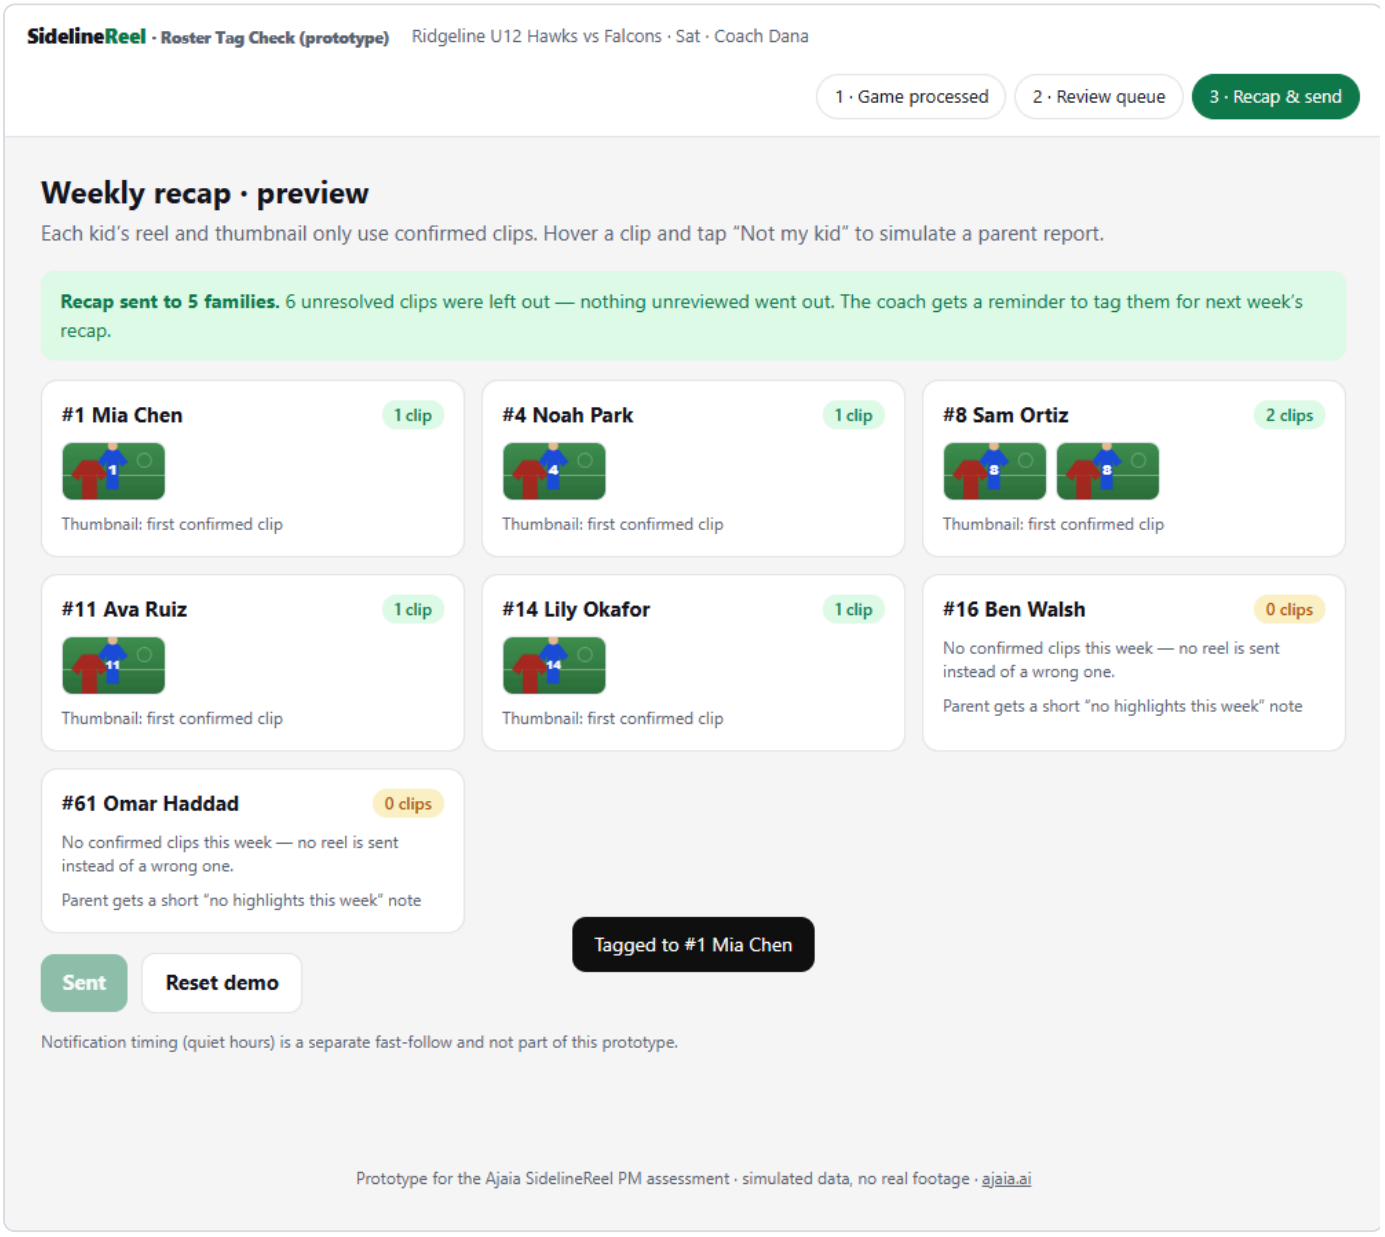

Click "3 · Recap & send" at the top. The yellow banner says 6 clips are held and that they are excluded from every reel and thumbnail. Some players have no confirmed clips.

- Compare this with Step 12: held clips are simply missing, never guessed.

Step 20 — The send cutoff passes with clips still held

Click “Simulate Sunday 6 PM send”. The recap goes out with confirmed clips only. The banner reports how many unresolved clips were left out and says the coach is reminded to tag them for next week.

- **Key rule from the spec:** nothing unreviewed is ever sent. The worst outcome is a thinner reel, not a wrong-kid reel.

Takeaway. The prototype shows the product rule in the spec: ambiguous matches get a human, parents can flag mistakes, and unresolved clips are excluded rather than guessed. The matching rules panel shows the tradeoff the team must tune: fewer wrong-kid clips versus more coach work.
